Project Requirements Brief: Ethio Market App

1. Overview & Vision

Ethio Market is a modern e-commerce marketplace application tailored for the Ethiopian market. The entire solution must be generated using No-Code AI workflows and prompt engineering, integrating multiple local languages, comprehensive regional categorization, secure mobile/bank payments, and absolute administrative control.

2. Core Functional Requirements

Requirement	Technical Specification for AI Generation
Admin Panel	Strict authentication and authorization framework. Only authorized Admin users can view the
Multi-Language	Dynamic front-end language switching localized for Ethiopia. Supported languages: Afaan Or
Payment Gateway	No-code API integration via Chapa Payment Gateway or WeBirr. Must seamlessly handle Te
Location Filter	Database architecture filtered by major Ethiopian cities. Users must be able to view and sort

3. Suggested No-Code AI Architecture

• **Front-end & UI/UX:** FlutterFlow or Lovable.dev (fully configured with cross-language support and deep integration with payment widgets).

• **Backend & Database:** Firebase or Supabase configured with standard user role tables (Admin, Vendor, Buyer) and city listing categories.
